CHEMISTRY

Paper 3

June 2022 – TIME Hours

Name:

Adm No.

Class: Candidate's Signature:

Date: 24/06/2022

CHEMISTRY (PRACTICALS)

TIME: 2 1/4 HOURS

INSTRUCTIONS TO CANDIDATES

- Write your Name, Adm. number and Class in the spaces provided in the question paper.
- Sign and write the date of examination in the spaces provided above.
- Answer ALL questions in the spaces provided on the question paper
- You are NOT allowed to start working with the apparatus for the first 15 minutes of the 2 1/4 hours allowed for this paper. This time is to enable you to read the question paper and make sure you have all the apparatus and chemicals that you may need.
- All working MUST be clearly shown where necessary
- Mathematical tables and silent non-programmed electronic calculators may be used.

FOR EXAMINERS USE ONLY.

QUESTION	MAXIMUM SCORE	CANDIDATES	SCORE
1	20		
2	10		
3	10		
Total Score	40		

This paper consists of 8 printed pages.

Candidates should check the question paper to ascertain that all pages are printed as indicated and that no questions are missing.

1. (A) You are provided with:

- **Solution A** – Acidified aqueous potassium manganate(VII).
- **Solution B** – containing 23.5g of ammonium Iron (II) sulphate; $(\text{NH}_4)_2\text{Fe}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, per litre.

You are required to Standardize the potassium manganate (VII), solution A, using the ammonium iron(II) sulphate, Solution B.

Procedure

- Fill the burette with solution A.
- Pipette 25.0cm^3 of solution B into a conical flask. Titrate solution B with solution A until a permanent PINK colour just appears.
- Record your results in table I below.
- Repeat the titration two more times and complete the table below.

Titre	1	2	3
Final burette reading (cm^3)			
Initial burette reading (cm^3)			
Volume of Solution A used (cm^3)			

(4 marks)

(a) Determine the average volume of solution A used.

(1 mark)

$$= \underline{\text{titre 1}} + \underline{\text{titre 2}} + \underline{\text{titre 3}}$$

3

$\frac{1}{3} \times$ each
titre

$$= \text{Average titre}$$

(b) Calculate the concentration of the ammonium iron (II) sulphate, Solution B, in moles per litre. (RFM of $(\text{NH}_4)_2\text{Fe}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$) = 392

(1 mark)

$$= \frac{23.5}{392}$$

$$= 0.05995 \text{ moles per litre}$$

Precipitate 0.06 moles per litre

(c) Calculate the number of moles of iron(II) ions in the 25.0cm^3 of solution B.

$$= 25 \times \text{answer (b)}$$

$$= 25 \times 0.05995$$

1000

1000

P

= Correct Answer

$$= 0.001499.$$

- (d) Using the ionic equation for the reaction between manganate(VII) ions and iron(II) ions given below, calculate the concentration of manganate(VII) ions in solution A in moles per litre.

<u>Moles of A used</u>	<u>Moles of A in 1000 cm³</u>	<u>M₁V₁ = 5</u>
$= \frac{1}{5} \times \text{Answer (C)}$	$= \text{Answer Q} \times 1000$	<u>M₂V₂</u>
<u>= Answer Q</u>	<u>Average Titre</u>	$M_2 = \frac{\text{Answer (b)} \times 25}{5 \times \text{Ave. titre}}$
	<u>= Correct Answer</u>	<u>= Correct Answer</u>

1. (B) You are provided with:

- (i) 4.5g of solid D, Potassium chlorate in a boiling tube.
(ii) Distilled water in a wash bottle

You are required to determine the solubility of solid D at different temperatures

Procedure

- Clean the burette and fill it with distilled water.
- Place 20cm³ of distilled water into the boiling tube containing solid D.
- Warm the mixture until all the solid D dissolves.
- Place the thermometer into the solution and remove it from the Bunsen burner flame.
- Stir the solution with the thermometer gently as it cools. Note the temperature at which the crystals first appear and record it in table 2 below.
- Add 20cm³ of distilled water into the mixture and repeat the procedure (c) – (e) above to complete table 2 below.

Volume of water added(cm ³)	Temperature at which first crystals appear (°C)	Mass of KClO ₃ in g/100g of water
8	75 ± 2°C	42.5 56.25
10	42	25.0 45.0
12	30	56.25 37.50
14	28	45.0 32.14

Temp. below 25-100.

(6 marks)

- g) Plot a graph of solubility of KClO₃ (y-axis) against temperature at which crystals first appear.

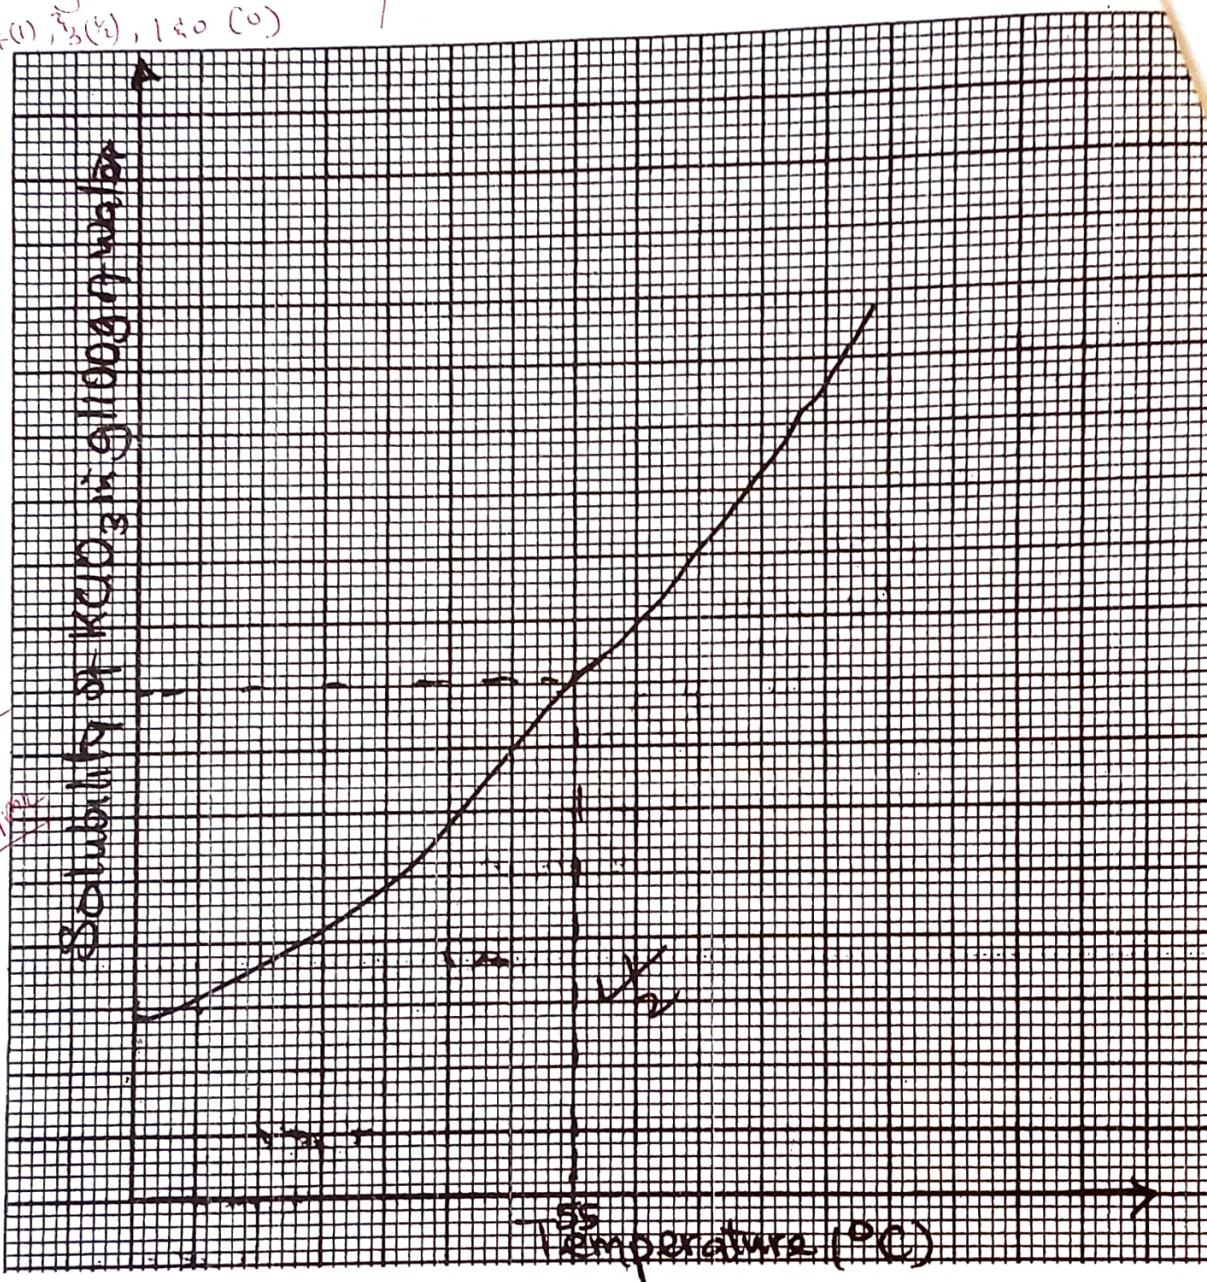

(3marks)

Scale - at least 10 sq. x axis
10 sq. y axis.

Axis - Quantity & units

Plotting - 4(1), 3(1), 1(1) (0)
the correct plots.

4

ii) State the effect of changes in temperature on the solubility of KClO_3 . (1 mark)

- Increase in Temperature increases the solubility of KClO_3 , decrease in temperature decreases the solubility of KClO_3 .

GOA

B, C, G, M, O.R.

OBONYO

V, W, Y, P, R

iii) From your graph, determine the solubility of KClO_3 at 55°C .

(1 mark)

Showing \checkmark_2

Correct reading \checkmark_2

2. You are provided with solid R. Carry out the tests below. Write your observations and inferences in the spaces provided.

- (a) Place about one third of solid R in a clean dry test-tube and heat it strongly.

Observations	Inferences
<p>Colourless liquid \times forms on the cooler parts of the test tube Residue is yellow when hot and white when cold. $\text{Yellow solid} \parallel$ Yellow residue</p>	<p>Water of crystallisation or hydrated salt. or OH^- ZnO formed (1 mark) Zn^{2+} present</p>

- (b) Place the remaining solid R in a boiling tube. Add about 10cm^3 of distilled water and shake well. Retain the mixture for tests in (d) below.

Observations	Inferences
<p>Solid R dissolves to form a colourless solution.</p>	<ul style="list-style-type: none"> Soluble salt. Absence of coloured ions. $\text{Fe}^{2+}, \text{Fe}^{3+}, \text{Cu}^{2+}$ must mention the ions.

Omenda / Elijah
B, C, G, M, Or V, W, Y, P, R

- (c) Use about 2cm^3 portions of the mixture obtained in (b) for tests (i) to (iii) below.
- (i) Add two to three drops of aqueous barium nitrate to the mixture.

Observations	Inferences
White Precipitate acc white solid white suspension. (1 mark)	$\text{SO}_4^{2-}, \text{CO}_3^{2-}, \text{SO}_3^{2-}$ present All 3 mentioned - 1mk 2 mentioned - $\frac{1}{2}$ mk 1 mentioned - 0mk. Penalize $\frac{1}{2}$ mk for contradiction to a max of 1mk. (1mark)

- (ii) Add five drops of dilute nitric(V) acid to the mixture. *in c(i) above*

Observations	Inferences
White ppt, insoluble On addition of nitric (v) acid. (1 mark)	SO_4^{2-} present. Accept for $\frac{1}{2}$ mk. $\text{SO}_3^{2-}, \text{CO}_3^{2-}$ absent. contradicting; penalize fully. (1mark)

- (iii) Add to the mixture, aqueous ammonia dropwise until in excess

Observations	Inferences
White ppt soluble in excess. (1 mark)	Zn^{2+} (1mark)

IMBUGA / JESSE
B, R, Or, V, N Y, M, G, C, P

3. You are provided with an IMPURE organic substance, solid Q. You are required to carry out the tests indicated below.

Place a ~~ALL~~ of solid Q in a boiling tube. Add about 10 cm^3 of distilled water and shake well. Divide the mixture into four equal portions in test tubes.

Observations	Inferences
Dissolve to form a colourless solution (1 mark)	Polar organic compound polar compound [also scores] (1 mark)

- a) To the first portion, add two drops of acidified potassium manganate (VII) solution.

Observations	Inferences
Purple H^+ / KMnO_4 (aq) Changes to Colourless red turns (1 mark)	$\begin{array}{c} \text{C}=\text{C}, -\text{C}\equiv\text{C}-, \text{R-OH} \\ \backslash \quad / \\ \text{C} \end{array}$ [either or both] (1 mark)

- b) To the second portion, add three drops of acidified potassium dichromate(VI).

Observations	Inferences
Orange H^+ / $\text{K}_2\text{Cr}_2\text{O}_7$ (aq) changes to green. (1 mark)	R-OH present or reducing agent. [either] (1 mark)

Joshua | Tim
B, P, R, C, G Or, V, W, Y, M

(c) To the third portion, add all the sodium hydrogen carbonate.

Observations	Inferences
Bubbles of a colourless gas / Effervescence (1 mark)	H^+ , H_3O^+ , R-COOH H^+ alone $\frac{1}{2}$ mark H_3O^+ alone $\frac{1}{2}$ mark R-COOH alone full mark (1 mark)

(d) Test the pH of the fourth portion using universal indicator solution provided.

Observations	Inferences
pH = 3 Accept plt = 1, 2, 3 (1 mark)	Strongly Acidic Rej strong acid (1 mark)

Rej range
