CPA PART II SECTION 4

CIFA PART II SECTION 4

CCP PART II SECTION 4

QUANTITATIVE ANALYSIS

FRIDAY: 27 May 2016.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

OUESTION ONE

- Explain four differences between the project evaluation and review technique (PERT) and the critical path analysis (CPA).
- (b) A certain audit firm has two categories of employees, auditors and assistant auditors. The total monthly salary of 1 auditor and 5 assistant auditors amount to Sh.456,755 whereas the total monthly salary of 3 auditors and 9 assistant auditors amount to Sh.985,005. The firm has a total of 6 auditors and 14 assistant auditors. The employees contribute 12 per cent of their monthly salaries towards their sacco society.

Required:

(i) The monthly salary of an auditor and an assistant auditor, using matrix algebra.

(4 marks)

(ii) The employees' total monthly contribution towards their sacco society.

(1 mark)

(c) Shujaa Limited deals in the manufacture of a product named "Zed". The product "Zed" is produced on order and the company does not keep inventory of the product. The demand and total cost functions (in thousands of shillings) of the company are given as follows:

$$P = 190 - q$$

and

$$TC = q^2 + 10q + 500$$

Where: P is the unit selling price.

q is the quantity demanded in units.

TC is the total cost.

Required:

(i) The maximum profit of the company.

(6 marks)

(ii) The output level that would maximise total revenue.

(1 mark) (Total: 20 marks)

QUESTION TWO

(a) Distinguish between a "univariate function" and a "multivariate function".

(2 marks)

(b) The mean weight of 500 packaging tins from a production process are normally distributed with a mean weight of 151 grammes and a standard deviation of 15 grammes.

Required:

(i) The number of packaging tins that weigh between 120 grammes and 155 grammes.

(4 marks)

(ii) The number of packaging tins that weigh more than 185 grammes.

(3 marks)

CA43, CF43 & CP43 Page 1 Out of 4 (c) The following data were obtained from the records of Kiwandani Limited for the year 2015:

| Month | Total overhead cost (y) | Director labour hours (x) |
|--|----------------------------|---------------------------|
| Makes Mark State Co. S. September 1997 | (Sh.) | |
| January | 16,250 | 1,056 |
| February | 15,000 | 736 |
| March | 15,000 | 840 |
| April | 14,500 | 800 |
| May | 15,250 | 880 |
| June | 15,750 | 1,008 |

Required:

(i) The least squares regression function relating direct labour hours and total overhead cost.

(7 marks

(ii) The coefficient of determination. Comment on your result.

(4 marks)

(Total: 20 marks)

QUESTION THREE

(a) Explain the following terms as used in game theory:

(i) Pay-off.

(1 mark)

(ii) Value of a game.

(1 mark)

(b) Highlight eight steps followed in the simulation process.

(8 marks)

(c) The table below shows the actual sales and target sales of eight sales agents for the year 2015 in millions of shillings.

| Sales agent | i znol | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|------------------|--------|----|----|----|----|----|----|----|
| Actual sales (y) | 45 | 41 | 50 | 56 | 60 | 42 | 43 | 52 |
| Target sales (x) | 40 | 27 | 45 | 38 | 52 | 35 | 29 | 44 |

Required:

The Spearman's rank correlation coefficient. Interpret your result.

(4 marks)

(d) A cashier at a departmental store can serve on average 24 customers per hour. The arrival rate of customers averages 20 customers per hour. The departmental store applies a single channel queuing system.

Required:

(i) The probability that the cashier is idle.

(2 marks)

(ii) The average number of customers in the queuing system.

(2 marks)

(iii) The average time a customer spends in the queue waiting to be served.

(2 marks)

(Total: 20 marks)

QUESTION FOUR

(a) Viwanda Limited deals in the production of a product named "Nguvu". The production cost of the product is Sh.500 per unit (excluding packaging cost). The product is sold at Sh.1,000 per unit. The company is considering the purchase of one out of three different packaging systems. The cost data for the three packaging systems are as follows:

| Packaging system | Purchase cost | Variable cost per unit of product | Scrap value | | |
|------------------|---------------|-----------------------------------|-------------|--|--|
| | Sh. "000" | Sh. "000" | Sh. "000" | | |
| A | 100 | 1.50 | 10 | | |
| В | 200 | 1.00 | 20 | | |
| C | 400 | 0.50 | 40 | | |

CA43, CF43 & CP43 Page 2 Out of 4 All the three packaging systems have a useful life of one year after which they would be sold at their estimated scrap values. The probability distribution for the demand for product "Nguvu" is as provided below:

| Demand | (units) | Probabili | ty | | | |
|--------|---------|-----------|---------|--|------|--|
| 100 | | 0.3 | ANTA DE | | | |
| 200 | 0.005 0 | 0.6 | | | 89.0 | |
| 400 | 0 10.0 | 0.1 | | | | |

Required:

Recommend the packaging system that should be purchased by Viwanda Limited.

(8 marks)

(b) Farm Produce Limited is a producer and distributor of maize flour. The company owns milling plants in Eldoret, Nanyuki and Narok towns. The milling plants have not been able to meet the demand orders of the company's distribution offices located in Mombasa, Kisumu, Nairobi and Isiolo towns. The company is considering the construction of a new milling plant either in Nakuru town or Meru town, in order to expand its production capacity.

The data below relate to the company's production and demand requirements.

| Milling plant | Monthly output (units) | Unit production cost (Sh.) |
|---------------|------------------------|----------------------------|
| Eldoret | 30,000 | 96 |
| Nanyuki | 12,000 | 100 |
| Narok | 28,000 | 104 |

| Distribution office | Monthly demand (units) |
|---------------------|------------------------|
| Mombasa | 20,000 |
| Kisumu | 24,000 |
| Nairobi | 30,000 |
| Isiolo | 18,000 |

Additional information:

- 1. The estimated unit production costs in Nakuru and Meru towns are Sh.98 and Sh.106 respectively.
- 2. The unit transportation costs (in shillings) from each milling plant to each distribution are given as follows:

| | | | To | | |
|------|---------|---------|--------|---------|--------|
| | | Mombasa | Kisumu | Nairobi | Isiolo |
| | Eldoret | 64 | 36 | 52 | 58 |
| From | Nanyuki | 56 | 52 | 44 | 32 |
| | Narok | 58 | 42 | 36 | 50 |

3. The estimated unit transportation costs (in shillings) from each of the proposed milling plants to each distribution office are as follows:

| | | | To | | | |
|------|--------|---------|--------|---------|--------------|--|
| From | | Mombasa | Kisumu | Nairobi | Isiolo 52 | |
| | Nakuru | 60 | 46 | 40 | | |
| | Meru | 62 | 56 | 46 | 28 | |

4. Assume that the construction of one of the proposed milling plants would satisfy the demand deficiency.

Required:

Using the Vogel's approximation method (VAM), advise the management of Farm Produce Limited on the best location to construct the milling plant. (12 marks)

(Total: 20 marks)

QUESTION FIVE

(a) Outline three differences between the normal distribution and the t-distribution.

(3 marks)

(b) A certain project is expected to be completed within 18 weeks. The expected net revenue if the project is completed on time is Sh.1,120,000 but a penalty of Sh.484,000 will be imposed if the project is not completed on time. The cost of the project is Sh.459,000. The standard deviation of the project's duration is 2.08 weeks.

The table below is a summary of activities required to complete the project, the duration of the activities and their preceding activities.

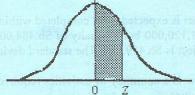

| Acti | vity | | Duration | | Preceding a | activity | | | | |
|--------|-----------|-------------|-----------------|------------|--|------------|------------|------------|-----|-----------|
| | | | (weeks) | | Losto. | 0210. | | | | |
